

EASIPOINT

Reproface

A Natural for Stone and Brickwork Repairs

EASIPOINT REPROFACE provides effective, lasting repairs to stone or brickwork damaged due to erosion, weathering or accidental impact.

Through-coloured and quick setting REPROFACE is a versatile cementitious mortar which can be moulded and textured to blend with the existing surface.

REPROFACE is a single pack powder mix of Portland cement conforming to BS 12 : 1996 Strength Class BS EN 197/1 : 2002, lime, chemical modifiers and specially selected high quality sand aggregates to BS 1200. The mix is factory produced under a quality system accredited to the ISO 9000 series.

REPROFACE is available in a range of 13 standard colours to complement the natural stone and brickwork colours most prominent in the UK.

Excellent adhesion enables hi-build layers to be constructed quickly, ready for finishing either by marking to replicate the joints of surrounding masonry or textured using a variety of conventional methods.

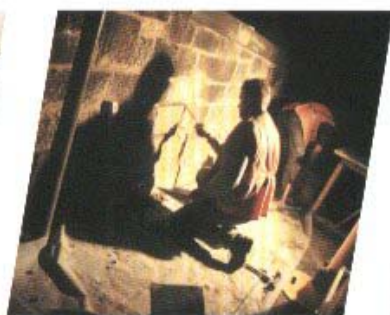

Where subtle differences in colour are required, a solution containing pigments can be brushed into the surface to provide texture and to emulate natural variations in surface colour.

REPROFACE provides a lasting, weatherproof repair with high flexural strength.

Typical Performance (all at 20°C)

Working Time:	5 minutes (depending on conditions)
Initial Set:	10 minutes (depending on conditions)
Strength:	24 hours 7N/mm ² 28 days 14N/mm ²
WSR:	0.2 to 0.22 lt/kg
Bulk Density:	1,600 kg/m ³
Fresh Wet Density:	2,000 kg/m ³
Chloride:	Less than 0.002% by weight
Packaging:	5kg bags

Please refer to the product Safety Data Sheet before use.

Typical areas of use

- Stonework
- Simulated & cast stone
- Brickwork
- Arches
- Balustrades
- Mouldings
- Sills, header & mullions

Benefits

- Through coloured
- Excellent adhesion
- Weatherproof
- High flexural strength
- Broad range of standard colours
- Suitable for texturing or ageing
- Natural sheen-free finish
- Easy to apply
- Bespoke colours available
